## Прочтите и обозначьте требования к подаче рукописи (рис. 7)

### Submission Requirements

You must read and acknowledge that you've completed the requirements below before proceeding.

- The submission has not been previously published, nor is it before another journal for consideration (or an explanation has been provided in Comments to the Editor).
- The submission file is in OpenOffice, Microsoft Word, or RTF document file format.
- Where available, URLs for the references have been provided.
- The text is single-spaced; uses a 12-point font; employs italics, rather than underlining (except with URL addresses); and all illustrations, figures, and tables are placed within the text at the appropriate points, rather than at the end.
- The text adheres to the stylistic and bibliographic requirements outlined in the Author Guidelines.

### Comments for the Editor

Rich text editor toolbar with icons for undo, redo, bold, italic, underline, link, unlink, code, list, image, upload, and a plus sign. Below the toolbar is a large empty text area for comments.

- Yes, I agree to have my data collected and stored according to the [privacy statement](#).

**Save and continue** Cancel

- Прочтите и подтвердите Заявление о конфиденциальности, нажав на **“Save and continue”** (рис. 8)

**Abstract \***

This article summarizes the research on computational methods to detect academic plagiarism by systematically reviewing 239 research papers published between 2013 and 2018. To structure the presentation of the research contributions, we propose novel technically oriented typologies for plagiarism prevention and detection efforts, the forms of academic plagiarism, and computational plagiarism detection methods. We show that academic plagiarism detection is a highly active research field. Over the period we review, the field has seen major advances regarding the automated detection of strongly obfuscated and thus hard-to-identify forms of academic plagiarism. These improvements mainly originate from better semantic text analysis methods, the investigation of non-textual content features, and the application of machine learning. We identify a research gap in the lack of methodologically thorough performance evaluations of plagiarism detection systems. Concluding from our analysis, we see the integration of heterogeneous analysis methods for textual and non-textual content features using machine learning as the most promising

**Srpski**

U radu je prikazano istraživanje u vezi računarskih metoda za otkrivanje akademskog plagijarizma, i to sistematskim pregledom 239 istraživačkih radova objavljenih između 2013. i 2018. godine. Kako bi se na bolji način predstavio doprinos istraživanja, predlažemo nove tehnički orijentisane tipologije za sprečavanje i otkrivanje plagijarizma, oblike akademskog plagijarizma i računске metode za otkrivanja istog. U radu ćemo prikazati da je otkrivanje akademskog plagijarizma visoko kotirana istraživačka tema. U periodu koji analiziramo, uočen je značajan napredak u pogledu automatizovanog otkrivanja teško prepoznatljivog oblika akademskog plagijarizma. Ova poboljšanja uglavnom potiču od boljih semantičkih analiza teksta, istraživanja netekstualnih sadržaja i primene mašinskog učenja. U nedostatku metodološki temeljnih procena performansi sistema za otkrivanje plagijata identifikovan je jaz u istraživanju. Zaključujemo da se vidi integracija heterogenih metoda analize tekstualnih i netekstualnih sadržaja sa korišćenjem mašinskog učenja kao najperspektivnijeg područja za buduće doprinose u istraživanju, a sve u cilju otkrivanja akademskog
